

## **Sending Data on the Scanners**

Note: Your scanner does not have a live connection to the server. So, when you complete a task and need to update the server's information you "Send the Data" to the Server.

1. After completing a task such as transferring a part from one location to another or picking an order, click the send data button located in the upper right of your screen.

2. Click the “Send Data” button.

3. If a task on the menu is orange, this means you have completed that task and have some data that needs to be sent to the server.
